SECURE

Products that passed hardest security tests by our customers with the most complex security requirements

Angora Networks

—

Since 2016, the year it was founded, Angora Networks has rapidly completed product development and production stages with its own resources and started sales activities, identified as domestic network device manufacturer and added many well established institutions among its references in a short period. Angora Networks achieved this success, thanks to its expert and seasoned staff with decades of knowledge in the industry.

Angora Networks has developed the necessary infrastructure to create products that, comply with industry standards, ready to perform from day one, and also physically and technologically reliable. Angora Networks product portfolio consists of high-tech and innovative products at global standards that meet customers real life requirements. Angora Networks also shares its know-how of communication networks (Network) obtained from R&D activities as part of Professional Services offerings. Online support and constantly updated documentation of the products allow users to install and operate their devices very quickly and safely.

Corporate	48 Port Switch
Aggregation	24/48x10G Port Switch
All-in-One	24x1-16x10-8x25G Port S.

Data Center/TOR Edge Routing

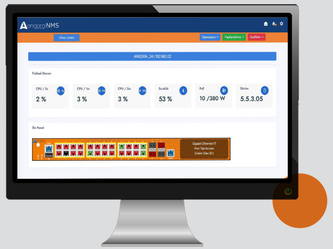

ThinCE VDIaaS

With ThinCE VDI service, you will get complete set of VDI components, including the license and all in one Thin-Clients you will need for the VDI services, with monthly subscription.

Next day replacement and support services are included in the subscription during the contract. This will help to use all Thin-Client hardware and centralized management software that you operationally need, on a single infrastructure, with zero initial investment cost.

Angora NMS Network Management Solutions

Manage active devices from any vendor within a single platform by ANGORA NMS.

ANMS provides vendor independent monitoring for your devices, as well as running all the tasks required for every stage in the installation, operation, and decommisionning cycle of Angora Networks product family. By using a single common interface, you can perform transactions and follow all your devices. With the visual dashboards of the devices, license information, critical system thresholds and easy access options, it offers simple and only required details.

Ant Network Packet Broker

Designing and operating your network is vital to provide the perfect flow to corporate applications. A network that is not designed to meet correct demands of a company and that requires big changes for each new requirement, would eventually cause a failure. This failure point, is usually comes with business shortages and cause service delivery problems, money loss and reputation erosion. Communication and application requirements change almost daily, and mandates your network runs on very high speeds. This is only sustainable, by implementing high performance devices, appropriate monitoring solutions and efficient security measures.

Increase Network Visibility

Ant helps you control your data more effectively by managing large amounts of traffic in your corporate network with powerful tools.

Packet Broker Roles

- Security chain management
- Help with SSL solution
- Application control and analysis

Services
