ANT Network Packet Broker

Make your network much more secure by maximizing the visibility of your corporate network with Angora Ant Network Packet Broker.

Setting up and managing your network correctly is vital to keep the flow to your applications. A network structure that cannot be set up correctly, is not ready for future needs and needs major changes in every different decision will cause an error at some point. Evolving communication and application needs dictate that your network be at very high speeds. To achieve this speed, you need the right imaging instruments and the efficiency of security measures, in addition to needing performance devices.

Ant provides the intelligent package management you need to eliminate the architectural complexity of security and application chains. KARINCA addresses all your needs with its very high capacity traffic flow, different topology support required for your architecture, packet filtering and transfer features, easy drag/drop interface and customization possibilities.

IMPROVE NETWORK VISIBILITY

The way to increase visibility in your corporate network is to collect data from more points. This results in an architecture that is very difficult to manage. Ant Packet Broker helps you to audit the data by managing the data with its easy and understandable interface and powerful tools.

PACKET BROKER TASKS

It sends only relevant traffic to each link of the chain. With detailed filtering and matching, you prevent unnecessary resource usage.

EFFICIENT NETWORK FILTERING

Packet Distributor uses smart traffic selection and distribution filters. These filters classify traffic from different ports according to completely different criteria. In accordance with the layered structures in your architecture, it is ensured that the traffic is transferred to the appropriate analysis and monitoring solution.

EFFICIENT NETWORK FILTERING

With a very easy and fast drag/drop interface, you can activate the services within minutes and provide instant transitions between the test environment and the production environment.

Model	Definition
ANW-ANT-10000-BASE	ANT Packet Broker Base License - 8 x 1/10/25Gbps - Filtering Package - 100Gbps Throughput
ANW-ANT-10000-ADD-XP	ANT Packet Broker Additional X x 1/10/25Gbps Port Activation License
ANW-ANT-10000-ADD-YGB	ANT Packet Broker Additional Y Gbps Throughput Activation License
