Angora NMS

Every device you add to your network creates various tasks for administrators in every process from installation to deactivation. Each step requires completing many complex configurations and making the right decisions to integrate with the entire network. Considering the business intensity and the importance of business continuity, it is very critical that all transactions are fast and smooth. Therefore, you need a manager who is reliable, fast and will minimize human error. We all know that if you have an organization to protect and look after, ANMS is the best manager you can find.

ANMS undertakes the tasks required to make every stage run smoothly in the installation, operation and decommissioning cycle of the Angora Networks product family. Thus, it ensures that critical processes related to your network are completed in the fastest and most accurate way. By using a single common interface, you can perform operations and follow-up on all your devices. With the visual status of the devices, license information, critical system values and easy access options, it offers you simple and only the details you need. ANMS is ready to provide you with the services you expect from a manager.

MANAGE ALL YOUR DEVICES

Single screen management, including devices from brands other than Angora.

FAULT-FREE CONFIGURATION WITH WIZARDS

Automatic configurations for critical security functions that prevent failure.

REPORTING INTERFACE

Cockpit screens, created according to the needs of the industry, with the suggestions of experts from within the industry, and containing only the data needed.

BACKUP AND UPDATE

Take backups of all your devices, compare and update to the latest versions.

QUICK ACCESS TO ALL DEVICES

Angora NMS provides fast and easy access to all devices on the network.

NETWORK MAP

Network maps that contain all devices on your network.
